Introduction

Modernizing data drives engineering productivity and business impact

For engineering teams, the burden of maintaining data pipelines doesn't just slow them down — it prevents them from driving innovation. Meanwhile, business users need seamless, real-time access to insights to help their organization remain competitive. Adopting a modern data stack is the key to integrating, automating, and scaling data operations while freeing up engineering resources to focus on strategic initiatives.

Fivetran is at the forefront of automated data integration, empowering top enterprises to drive engineering productivity while enabling data-driven decision making. Leading companies like DocuSign, Autodesk, and Pfizer have embraced Fivetran's modern data solution to overcome engineering-intensive pipeline maintenance and fragmented data, unlocking new efficiencies and empowering their teams. Through automation, cloud-based infrastructure, and self-service analytics, they have successfully streamlined data management, reduced engineering bottlenecks, and accelerated access to insights that drive business impact.

Chapter 1

DocuSign scales insights and regains engineering time

DocuSign, the global leader in e-signature technology since 2003, helps over 1 million customers and hundreds of millions of users in 180+ countries streamline and accelerate workflows, enhancing efficiency in managing agreements.

GOAL

As DocuSign grew, its SQL Server database struggled to keep up. To modernize its data strategy, DocuSign migrated to Snowflake — but unlocking the full potential of its modern data stack required an efficient way to centralize data without overwhelming engineering resources. Building and maintaining data pipelines required months of engineering effort, with each data source demanding custom-built integrations. DocuSign knew this approach wasn't scalable.

SOLUTION

After trialing a few data integration solutions, the company turned to Fivetran for an automated solution that could streamline data movement with minimal engineering involvement. Connecting Fivetran to Snowflake took just 20 minutes — eliminating the need for complex configurations or specialized IT knowledge — and data began syncing automatically.

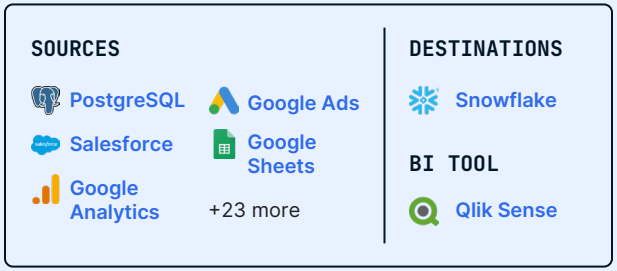

RESULTS

By adopting Fivetran and Snowflake, DocuSign:

- **Automated data integration across 54 sources**, eliminating months of pipeline development without having to double DocuSign's engineering team.
- **Expanded usable data sources 3x**, boosting insights and enabling more data-driven decision-making across teams.
- **Refocused teams on high-impact initiatives**, like data governance and enterprise dimensional modeling, instead of troubleshooting pipelines.
- **Empowered business teams with self-service analytics**, allowing 80% of employees to access real-time insights monthly without engineering intervention.

KEY STAT

Analyzes data from 3x more sources than before

> No one is going to build data pipelines themselves. [Fivetran] is a massive time and cost saver. Fivetran is the future — it's fast, reliable, and a massive productivity multiplier for our business.
>
> — **MARCUS LAANEN,** SENIOR MANAGER OF BUSINESS INTELLIGENCE AT DOCUSIGN

AUTODESK

Chapter 2

Autodesk democratizes data access and frees engineers from pipeline maintenance

Autodesk, a Fortune 1000 company, is revolutionizing industries like architecture, engineering, construction, manufacturing, and entertainment with over 100 software products, empowering innovators to design and make everything from city skyscrapers to movie imagery.

GOAL

With Autodesk's vast portfolio comes an enormous amount of data — petabytes of it. The challenge wasn't just handling data at scale but making it easily accessible across the organization while minimizing engineering effort. Autodesk sought to:

- **Modernize data infrastructure** to improve efficiency and performance.
- **Free up engineering teams** from the burden of pipeline maintenance and endless ingestion requests.
- **Enable self-service access to data** for 13,000+ employees, empowering teams with insights without engineering bottlenecks.

SOLUTION

To eliminate these inefficiencies while ensuring data remains accessible, reliable, and secure, Autodesk adopted a modern data stack powered by Fivetran, Snowflake, and dbt. Instead of spending valuable time maintaining fragile, engineering-intensive pipelines, Fivetran's fully managed solution automatically handled schema changes, backfills, and complex ingestion scenarios. This shift meant that data could flow seamlessly into Snowflake without constant engineering intervention. Once Autodesk saw how easily Fivetran handled ingestion with minimal effort, they expanded its use to more critical data sources, saving significant engineering hours that would have been spent maintaining and troubleshooting data pipelines.

RESULTS With Fivetran, Autodesk has seen transformational benefits across the organization:

- **Freed up engineering teams:** Instead of managing pipelines, Autodesk's engineers can now focus on high-impact projects that drive innovation.
- **Enabled self-service analytics:** Over 60 data teams now have direct access to the data they need, reducing dependency on engineering support.
- **Faster time to insights:** With data flowing reliably into Snowflake, teams across marketing, sales, and product can always access real-time insights.
- **Enterprise-grade security and governance:** With team and connector permissions, custom roles, and single sign-on, Autodesk ensures scalable security across its massive user base.

KEY STAT

13,000+ employees empowered with self-service data

SOURCES		DESTINATIONS
PostgreSQL	Oracle	Snowflake
SQL Server	Salesforce	S3 Data Lake
Netsuite SuiteAnalytics	+1 more	

> "We've successfully migrated nearly 60 data teams that are ingesting, consuming, and sometimes publishing their own data products onto the Analytics Data Platform. Over half of those teams are working within Fivetran, assigned to different destinations and different roles. This self-service motion means that we set the platform rules, and the teams can access their data without coming to us."

Chapter 3

Pfizer accelerates clinical trials with real-time insights

Pfizer, the world's largest research-based pharmaceutical company, has 88,000+ employees across 180 countries and, in 2023, delivered medicines and vaccines to over 618 million people while investing billions in life-saving treatments like the first widely approved COVID-19 vaccine.

GOAL

Pfizer faced challenges managing data from thousands of clinical trials across global teams. A key obstacle was its 20-year-old data warehouse, which hindered real-time access. Engineering teams struggled with data extraction, replication, and analysis while maintaining business continuity. Additionally, Pfizer needed real-time visibility into clinical trial supply chains to ensure timely delivery of medications to the right locations. Pfizer needed a solution that could streamline data replication, improve access to insights, and power critical business operations without burdening engineering resources.

SOLUTION

Pfizer turned to Fivetran to automate data movement and enable real-time analytics across its operations. Using Fivetran, Pfizer could replicate data from its legacy warehouse to a modern lakehouse in Snowflake without disrupting business-critical workloads. With Fivetran's automated pipelines, Pfizer could aggregate data from multiple sources, fueling advanced analytics dashboards that support clinical trials, supply chain logistics, and financial operations.

RESULTS

By leveraging Fivetran, Pfizer achieved:

- **Accelerated data modernization:** Automating replication from legacy systems allowed Pfizer to seamlessly transition to a modern Fivetran + Snowflake-powered data architecture.
- **Freed up engineering resources:** Eliminating pipeline maintenance allowed teams to focus on innovation rather than infrastructure management.
- **Enhanced real-time analytics:** Instant access to data empowered Pfizer to make faster, data-driven decisions in clinical trials, manufacturing, and revenue management.
- **Improved global supply chain visibility:** Real-time insights into trial logistics ensured efficient medication distribution and compliance with regulatory requirements.

KEY STAT

Reduced data processing times from hours to minutes

SOURCES	DESTINATIONS
Oracle	Snowflake, Redshift
SQL Server	Databricks, +1 more

> "Without Fivetran, we would have needed 6 months to figure out our migration strategy to a new, modern data platform. Fivetran provides a framework for standardizing data replication across all of Pfizer, enabling us to achieve real-time analytics."
>
> — **JOHN LEONE,** SENIOR MANAGER OF GLOBAL PLATFORM SUPPORT SERVICES AT PFIZER

Conclusion

Eliminate data bottlenecks and accelerate innovation with Fivetran

Automation can eliminate the inefficiencies of data pipeline management and fully harness the power of data, allowing engineering teams to focus on innovation rather than infrastructure. With Fivetran, leading enterprises like DocuSign, Autodesk, and Pfizer have seamlessly centralized data, unlocked real-time insights, and scaled operations without overwhelming their technical resources.

Organizations that modernize their approach to data movement will outpace those wrestling with outdated, manual, and engineering-intensive processes. Fivetran is the key to this transformation, enabling companies to turn data into a strategic asset rather than an operational challenge. By automating data movement, businesses can unlock new efficiencies, enhance engineering productivity, and confidently scale into the future.

Fivetran

Fivetran, the global leader in data movement, helps customers use their data to power everything from AI applications and ML models to predictive analytics and operational workloads. The Fivetran platform reliably and securely centralizes data from hundreds of SaaS applications and databases into any cloud destination — whether deployed on-premises, in the cloud or in a hybrid environment. Thousands of global brands — including Autodesk, Condé Nast, JetBlue, and LVMH — trust Fivetran to move their most valuable data assets to fuel analytics, drive operational efficiencies and power innovation.
